Phone: 7012724183 | Email: anfask390@gmail.com | Location: Kannur, Kerala

LinkedIn: linkedin.com/in/anfas-k-77ab11347 | GitHub: github.com/anfas-02

PROFESSIONAL SUMMARY

AI and Robotics student with hands-on industry experience gained through an internship at iHub Research and Robotics Pvt, working on depth camera configuration and dataset creation using Roboflow. Proficient in Python, C++, OpenCV, TensorFlow, MediaPipe, YOLOv8, and ROS. Experienced in developing end-to-end AI solutions including computer vision systems, deep learning pipelines, embedded robotics, and interactive web applications using Streamlit.

EDUCATION

AI and Robotics Program

IHUB School of Learning

INTERNSHIP EXPERIENCE

Robotics and AI Intern

iHub Research and Robotics Pvt, Kannur, Kerala

- Configured and calibrated depth cameras for 3D perception tasks, enabling accurate spatial data capture for robotics and computer vision applications.
 - Built and annotated custom object detection datasets using Roboflow, streamlining the data labelling workflow and improving dataset quality for machine learning model training pipelines.
-

TECHNICAL SKILLS

Programming Languages: Python, C++

AI and Machine Learning: TensorFlow, CNN, Machine Learning, Computer Vision, RAG, FAISS, YOLOv8

Computer Vision and Robotics: OpenCV, MediaPipe, ROS, Embedded Systems, Depth Camera

Tools and Frameworks: Streamlit, Roboflow

PROJECTS

Self Balancing Robot

Designed and built an autonomous self-balancing robot using microcontroller programming and sensor fusion. Implemented a PID control algorithm for real-time stability and validated performance through iterative hardware testing and parameter tuning.

Diet Plan Recommender

Built an AI-powered diet recommendation system using Python that generates personalized meal plans based on user inputs including age, weight, height, and health goals. Developed an interactive Streamlit interface for seamless user experience.

Blood Donation System

Developed a Python and Streamlit web application to manage donor records, match blood groups, and streamline the blood donation process, improving data accessibility and operational efficiency.

AI Proctoring System

Designed and developed an AI-powered online exam monitoring system using computer vision and machine learning. Integrated YOLOv8 for mobile phone detection and MediaPipe for facial landmark analysis to track eye gaze and head movement. Implemented real-time face verification, multi-person detection, and tab-switch tracking. Built a Streamlit dashboard and automated PDF reporting with timestamped evidence.

Air Canvas AI

Designed and implemented a real-time AI-based Air Canvas application using OpenCV, MediaPipe, and TensorFlow. Enabled gesture-controlled handwritten character recognition via a CNN-based prediction pipeline with dynamic dataset expansion to continuously improve model accuracy.

AI Placement Assistant

Developed an AI-based placement assistant using Python with a RAG (Retrieval-Augmented Generation) approach. Integrated FAISS for efficient information retrieval to provide resume suggestions and interview preparation guidance. Built an interactive Streamlit interface for user interaction.
